

Intelli-Safe™

NEW INTELLIGENT POS SAFE DELIVERS UP TO 50% REDUCTION IN CASH SHRINKAGE COSTS

A new concept in intelligent Point-of-Sale safes - designed for smaller retail sites, petrol forecourts and fast food locations - can dramatically reduce cash shrinkage through the removal of all bulk cash from the till and the introduction of the 'One-Touch Cash' concept.

The Intelli-Safe™ from Solutions Direct, has been proven to reduce cash shrinkage by up to 50% through removing the temptation of a till full of cash to theft from staff.

Simple to operate, the cashier feeds all banknotes into the Intelli-Safe on receipt from the customer. The safe automatically validates the note, checking for counterfeit and, if accepted, stores it in the safe. With an unrivalled 98% first pass rate and storage within 2.5 seconds, cashiers can use the safe as an integral part of each transaction and get real time validation of every note. Each Intelli-Safe can hold up to 2400 notes, receiving them from up to ten cashiers at a time, and running individual reconciliation functionality throughout.

By removing the bulk of the notes from the till and public areas, the Intelli-Safe limits the manual handling of cash and therefore the opportunities for losses to occur. In addition, by keeping the level of cash to a minimum, staff safety, confidence and security is assured.

All counting is now performed electronically by the Intelli-Safe, eliminating the possibility of

discrepancies between bank and site reconciliations and reducing management time by up to two hours per day. The cash is removed in sealed cassettes by the owner or a secure courier and can be delivered

direct to the bank already reconciled. The safe can operate either stand-alone or be integrated into the retailer's EPOS system.

The fast and simple operation of the Intelli-Safe belies the considerable security and cost saving benefits for the retailer. Removing all of the banknotes from the till, leaving only the float remaining, hugely reduces the temptation for staff to steal, dramatically reducing cash shrinkage. ROI on the Intelli-Safe is proving to be around 9-11 months.

Designed by market leaders API Security Pty Ltd and already widely used in petrol forecourts, community retailers and fast food outlets throughout its home markets of Australia and New Zealand, the Intelli-Safe comes to the UK as an innovative but proven technology with Solutions Direct as the sole supplier of the product. Euro versions are also available.
