

Remote Note Deposit

NEW BANK WALL DEPOSIT CUTS COSTS

An innovative Remote Deposit for banks - designed to save Banks both time and manpower - has been launched in the UK by Air Tube Conveyors.

In some branches up to 3000 retailers use the external deposit safe mounted on the wall each day, making moving the deposited cash bags around the bank a full time job. The RND Safe not only replaces this manual activity but also avoids any Health & Safety issues regarding repetitive lifting and carrying of cash. The opportunity for theft is also reduced as all the money deposited is immediately carried away from the wall or public area.

The Remote Note Deposit combines Air Tube Conveyors safe and air tube technologies to automatically take the low-cost disposable 'Jetbag' deposited by the retailer away from the 'hole in the wall', night deposit safe or foyer paying-in machines to be reconciled elsewhere in the building.

Available with all the audit functions at the point of deposit that both the bank and retailer have become accustomed to, the new deposit is easy to operate. With the considerable savings in both time and manpower benefiting the bank, there are also advantages for the retailer in terms of security, traceability and safety.

Air Tube Conveyors is the UK's leading supplier of cash carrying air tube systems widely used in retail and has a strong track record in the development of intelligent cash handling solutions for retail and banking.

- *More efficient use of manpower*
- *Faster and more secure cash transfer*
- *Full audit functions*
- *Increased cash traceability*
