## Improve plant efficiency – Make use of air... Air Tube Conveying System...

AirTube Technologies are recognised for providing creative solutions that precisely meet the needs of customers whose commercial activities call for the secure conveying of cash, documentation, samples and other products.

### Oils Refinery Operations

These processes can be extremely complex with a number of organisational manufacturing processes and logistical areas working together for the companies' ultimate goal... The demands made on these operations, which include cost reductions, health and safety and increased efficiency while maintaining quality standards, are growing steadily.

The amount of time and floor space covered whilst the oil processing procedure is taking place and the movement of information and materials can easily eat into corporate returns and overall profits, however **AirTube** pneumatic tube systems provides fast and reliable assistance in reversing this drain meeting these needs at a low operating cost.

### Liquid/Granules/Documents: Transfer

Our industrial pneumatic tube system can transport virtually anything that fits into one of the special carriers such as crude oils, chemicals, additives for oils and food oil samples for laboratory testing. Others include powders, liquids, granulated materials, aggregates, small parts or tools. Additionally carriers can be loaded and unloaded either manually or automatically. Depending on the specification of the carrier they can be 'leak-proof' lockable and secure.

Most importantly, carriers are transported immediately at speeds of 5-6 metres per second. Hence, the results of laboratory analyses can be made available as soon as possible, speeding the decision-making process for further action. The AirTube's speed can be controlled depending on the type of samples to be sent.

### Benefits include:

- Increased productivity
- Improved workflow
- Added Health & Safety
- Rapid ROI

### What we provide...

- Free onsite survey to determine best solution
- Business case supporting ROI
- Low cost maintenance options
- Lease option available
